## HUMIDITY - A SEEPING CONCERN

'Invisible water' in the air is becoming an increasing concern as the industry across the world is incessantly driven to deliver consistently better quality. The resultant effects of relatively higher levels of humidity are obvious- corrosion, rot, mould, caking, bacterial growth, dimension changes, electrical resistance, etc. And the negative impact of such of those effects on 'quality' needs no special emphasis.

Consequently, the industry is compelled to tighten its operational tolerances in the production, preservation or transit process by effectively controlling the humidity factor. With 'dry air' becoming increasingly essential for numerous commercial and industrial applications, 'dehumidifiers' have come to assume a critical place. Thanks to the efforts of pioneers like ATPL, 'dehumidifying technology' has come of age to enable the industry leverage customized, competent and cost Efficient humidity control solutions.

## GOLDAIRE - A REASSURING SOLUTION

For about a decade, Goldaire has been a formidable name in the domain of dehumidifiers, enjoying extensive and ever - increasing patronage. A product of superior technology and proven efficiency, Goldaire represents a most reliable and reassuring means to effectively manage humidity problem. built to provide precise humidity levels all the time, Goldaire is engineered to ensure lasting performance. The other benefits of Goldaire include

- Compact Design: easy to handle and requires less space.
- Energy - efficient: saves substantially on operating costs as the desiccant rotor is energy efficient.
- Versatile: functions equally efficiently at normal or higher humidity levels.
- Hassle-free: Easy to replace seals, filters and heaters.
- Maintenance-free: Involves no special staff or costs
- Back-up Support: installation, training and service by the field-force from the factory.

## OUTSTANDING FEATURES THAT MAKE GOLDAIRE DEHUMIDIFIER A WINNER

Superior technology facilitated by tie-ups with leaders in the field. Proven track-record of performance for over a decade. Digital display of Room RH & Temperature.

Microprocessor - based controls and fault indication system .  
Connectivity to the BMS.

Optional steam coils, pre-cooling coils & after cooling coil modules. Wide spectrum of Dehumidifiers including custom built systems with different filtration modules to match requirements of very low and normal humidity. Specially designed Dehumidifiers for single pass air for product drying equipment like fluid bed dryers

**Engineered Dehumidifiers with air handling units, filtration or ENG. Dehumidifiers with Energy Recovery wheel are the latest addition to the range of products to ensure single point responsibility.**
